CONTENTS

JANUARY

W. H. Durum and Joseph Haffty: Implications of the minor element content of some major streams of the world 1

T. Kirsten, D. Krankowsky und J. Zähringer: Edelgas- und Kalium-Bestimmungen an einer größeren Zahl von Steinmeteoriten 13

Robert N. Clayton and Toshiko Mayeda: The use of bromine pentafluoride in the extraction of oxygen from oxides and silicates for isotopic analysis 43

G. W. Putman and C. W. Burnham: Trace elements in igneous rocks, Northwestern and Central Arizona 53

Robert F. Sippel: Sodium self diffusion in natural minerals 107

FEBRUARY

P. K. Theobald, Jr., H. W. Larkin and D. B. Hawkins: The precipitation of aluminum, iron and manganese at the junction of Deer Creek with the Snake River in Summit County, Colorado 121

R. M. Carr: Synthesis fields of some aluminium silicates—Further studies 133

Knut S. Heier and John J. W. Rogers: Radiometric determination of thorium, uranium and potassium in basalts and in two magmatic differentiation series 137

Reiner Goguel: Die chemische Zusammensetzung der in den Mineralen einiger Granite und ihrer Pegmatite eingeschlossenen Gase und Flüssigkeiten 155

R. D. Cherry: The determination of thorium and uranium in geological samples by an alpha counting technique 183

W. Gentner, H. J. Lippolt und O. A. Schaeffer: Argonbestimmungen an Kalium-mineralien—XI. Die Kalium-Argon-Alter der Gläser des Nördlinger Rieses und der böhmisch-mährischen Tektite 191

J. L. Mortensen and R. B. Schwendinger: Electrophoretic and spectroscopic characterization of high molecular weight components of soil organic matter 201

MARCH

Claude Huffman, Jr., H. H. Lipp and L. F. Rader: Spectrophotometric determination of micro quantities of zinc in rocks 209

J. R. Richards: Isotopic composition of Australian leads. III. Northwestern Queensland and the Northern Territory—A reconnaissance 217

Kurt Fredriksson and Robert Gowdy: Meteoritic debris from the southern California desert 241

Kurt Fredriksson and L. Robbin Martin: The origin of black spherules found in Pacific islands, deep-sea sediments, and Antarctic ice 245

L. Greenland and J. F. Lovering: The evolution of tektites: elemental volatilization in tektites 249

Reed Knox, Jr.: The microstructure of several stony meteorites 261

L. Greenland: Zinc in the standard rocks G-1 and W-1 269

R. F. Mueller: A comparison of oxidative equilibria in meteorites and terrestrial rocks . . 273

P. M. Hurley, J. M. Hunt, W. H. Pinson and H. W. Fairbairn: K–Ar age values on the clay fractions in dated shales 279

Geochemical Note

D. F. C. Morris and D. N. Slater: Hafnium in the rock G-1 determined by neutron-activation analysis 285

Letter to the Editors

STEFAN LOEWENGART: Some geochemical aspects of the Dead Sea and the question of its age 287

Book Reviews 289

Notice: Symposium on the Natural Radiation Environment 291

Errata 293

APRIL

I. R. KAPLAN, K. O. EMERY and S. C. RITTENBERG: The distribution and isotopic abundance of sulphur in recent marine sediments off southern California 297

L. H. AHRENS: Lognormal-type distributions in igneous rocks—IV 333

GEORGE L. BATE and J. R. HUIZENGA: Abundance of ruthenium, osmium and uranium in some cosmic and terrestrial sources 345

OTTO BRAITSCH und ALBERT GÜNTER HERRMANN: Zur Geochemie des Broms in salinaren Sedimenteno. Teil I: Experimentelle Bestimmung der Br-Verteilung in verschiedenen natürlichen Salzsystemen 361

P. M. HURLEY, B. C. HEEZEN, W. H. PINSON and H. W. FAIRBAIRN: K-Ar age values in pelagic sediments of the North Atlantic 393

LUIGI PAGANELLI: On rhenium content of molybdenite of Mount Mulat (Predazzo) and other Italian molybdenites 401

MAY

J. HOWER, P. M. HURLEY, W. H. PINSON and H. W. FAIRBAIRN: The dependence of K–Ar age on the mineralogy of various particle size ranges in a shale 405

J. S. HARINGTON and J. J. LE R. CILLIERS: A possible origin of the primitive oils and amino acids isolated from amphibole asbestos and banded ironstone 412

F. WLOTSKA: Über die hell-dunkel-struktur der urgashaltigen chondrite Breitscheid und Pantar 419

PAUL W. METZ und HELMUT G. F. WINKLER: Experimentelle Gesteinsmetamorphose—VII. Die Bildung von Talk aus kieseligem Dolomit. 431

MARTIN HARTMANN: Einige geochemische Untersuchungen an Sandsteinen aus Perm und Trias 459

FR. BUSCHENDORF, H. NIELSEN, H. PUCHELT und W. RICKE: Schwefel-Isotopen-Untersuchungen am Pyrit-Sphalerit-Baryt-Lager Meggen/Lenne (Deutschland) und an verschiedenen Devon-Evaporiten 501

JOHN A. COOPER: The flame photometric determination of potassium in geological materials used for potassium argon dating 525

Geochemical Notes

YOSHITO MATSUI and AKIMASA MASUDA: On the variation in relative abundances of rare earth elements among meteorites, igneous rocks and sediments 547

HARMON CRAIG and CHARLES D. KEELING: The effects of atmospheric N_2O on the measured isotopic composition of atmospheric CO_2 549

Book Review 552

JUNE

IRVING FRIEDMAN, THORBJÖRN SIGURGEIRSSON and ÖRN GARDARSSON: Deuterium in Iceland waters 553

ROBERT A. BERNER: Electrode studies of hydrogen sulfide in marine sediments 563

R. A. SCHMITT, R. H. SMITH, J. E. LASCH, A. W. MOSEN, D. A. OLEHY and J. VASILEVSKIS: Abundances of the fourteen rare-earth elements, scandium and yttrium in meteoritic and terrestrial matter 577

JOSEPH I. GOLDSTEIN and ROBERT E. OGILVIE: Electron microanalysis of metallic meteorites. Part I. Phosphides and sulfides 623

K. FREDRIKSSON and A. E. RINGWOOD: Origin of meteoritic chondrules 639

VERNE C. FRYKLUND, JR. and MICHAEL FLEISCHER: Abundance of scandium in volcanic rocks, a preliminary estimate 643

GEORGE T. FAUST: Minor elements in serpentine—additional data 665

PAUL EDWIN POTTER, N. F. SHIMP and J. WITTERS: Trace elements in marine and fresh-water argillaceous sediments 669

L. F. RADER, W. C. SWADLEY, CLAUDE HUFFMAN, JR. and H. H. LIPP: New chemical determinations of zinc in basalts and rocks of similar composition 695

Book Review 715

Notice 716

JULY

KURT FREDRIKSSON and KLAUS KEIL: The light-dark structure in the Pantar and Kapoeta stone meteorites 717

VON H. v. BUTTLAR: Stratosphärisches Tritium 741

A. J. EASTON and J. F. LOVERING: The analysis of chondritic meteorites 753

J. R. BUTLER and A. J. THOMPSON: Caesium in some alkali granites (Younger Granites) of Northern Nigeria 769

JOHN J. W. ROGERS and JOHN A. S. ADAMS: Lognormality of thorium concentrations in the Conway granite 775

D. B. HAWKINS and RUSTUM ROY: Distribution of trace elements between clays and zeolites formed by hydrothermal alteration of synthetic basalts 785

JOHN E. NOAKES, A. F. ISBELL, J. J. STIPP and DONALD W. HOOD: Benzene synthesis by low temperature catalysis for radiocarbon dating 797

I. R. KAPLAN, E. T. DEGENS and J. H. REUTER: Organic compounds in stony meteorites . 805

KARL K. TUREKIAN: The chromium and nickel distribution in basaltic rocks and eclogites . 835

Letter to the Editors

J. L. KULP, R. KOLOGRIVOV, J. ENGELS, E. J. CATANZARO, H. NEUMANN and B. NILSSEN: Age of the Tordal, Norway Pegmatite—A correction 847

AUGUST

K. S. HEIER: Uranium, thorium and potassium in eclogitic rocks 849

P. K. HÖRMANN: Zur Geochemie des Germaniums 861

L. H. AHRENS: Lognormal-type distributions in igneous rocks—V 877

PEDER J. ESTRUP: Spallation yields from iron with 24 GeV protons 891

C. O. INGAMELLS and NORMAN H. SUHR: Chemical and spectrochemical analysis of standard silicate samples 897

MAKOTO SHIMA: Geochemical study of boron isotopes 911

J. J. ROWE: Releasing-addition method for the flame-photometric determination of calcium in thermal waters 915

H. WATTS: The possible role of adsorption and diffusion in the accumulation of crude petroleum deposits; a hypothesis 925

SEPTEMBER

L. H. AHRENS: Element distribution in igneous rocks—VI. Negative skewness of SiO_2 and K 929

KLAUS KEIL and KURT FREDRIKSSON: Electron microprobe analysis of some rare minerals in the Norton County achondrite 939

H. CRAIG and L. I. GORDON: Nitrous oxide in the ocean and the marine atmosphere . . 949

H. D. HOLLAND, M. BORCSIK, J. MUNOZ and U. M. OXBURGH: The coprecipitation of Sr^{+2} with aragonite and of Ca^{+2} with strontianite between 90° and 100°C 957

Geochemical Note
F. C. Wolff: The Pollen meteorite, a Norwegian carbonaceous chondrite 981
Errata 979
Notice: The Twelfth Clay Minerals Conference 982

OCTOBER

M. W. Rowe, M. A. Van Dilla and E. C. Anderson: On the radioactivity of stone meteorites 983
M. W. Rowe, M. A. Van Dilla and E. C. Anderson: On the radioactivity of iron meteorites 1003
Brian Mason: Olivine composition in chondrites 1011
Walter Wahl: Cosmical changes and metamorphism of stony meteorites due to heating affects 1025
G. J. Schrayer and W. M. Zarrella: Organic geochemistry of shale—I. Distribution of organic matter in the siliceous Mowry shale of Wyoming 1033
D. B. Hawkins and Rustum Roy: Experimental hydrothermal studies on rock alteration and clay mineral formation 1047
D. A. Livingstone: The sodium cycle and the age of the ocean 1055
E. J. Green: Some comments on the bi-normal frequency distribution 1071

NOVEMBER

R. A. Schmitt, R. H. Smith and D. A. Olehy: Cadmium abundances in meteoritic and terrestrial matter 1077
R. D. Cherry and John A. S. Adams: Gamma-spectrometric determinations of thorium, uranium and potassium in tektites 1089
R. C. Reynolds Jr: Potassium–rubidium ratios and polymorphism in illites and microclines from the clay size fractions of proterozoic carbonate rocks 1097
J. E. Cooper and E. E. Bray: A postulated role of fatty acids in petroleum formations . 1113
G. W. Brindley, Robert Bender and Satyabrata Ray: Sorption of non-ionic aliphatic molecules from aqueous solutions on clay minerals. Clay-organic studies—VII 1129
Marie C. Clark and D. J. Swaine: Trace-element contents of the National Bureau of Standards reference samples numbers 1a, 98 and 99 1139
R. M. Farquhar and R. D. Russell: A nomograph for the interpretation of anomalous lead isotope abundances 1143
H. Fechtig, W. Gentner und P. Lämmerzahl: Argonbestimmungen an Kaliummineralien—XII. Edelgasdiffusionsmessungen an Stein- und Eisenmeteoriten 1149
V. Rama Murthy: Elemental and isotopic abundances of molybdenum in some meteorites . 1171
Geochemical Notes
Jon N. Weber: Digital computer information retrieval program for geochemical data . . 1179
C. Patterson and B. Duffield: The isotopic composition of lead in Easter Island rhyolite . 1180
Addendum 1182

DECEMBER

W. G. Smitheringale and M. L. Jensen: Sulfur isotopic composition of the Triassic igneous rocks of eastern United States 1183
W. L. McIntire: Trace element partition coefficients—a review of theory and applications to geology 1209
Paul L. Cloke: The geologic role of polysulfides—Part I. The distribution of ionic species in aqueous sodium polysulfide solutions 1265
Paul L. Cloke: The geologic role of polysulfides—Part II. The solubility of acanthite and covellite in sodium polysulfide solutions 1299
Erratum 1320

GEOCHIMICA ET COSMOCHIMICA ACTA

Information For Contributors

I. GENERAL

1. Papers on *geochemistry* should be submitted to the appropriate Editor—Prof. L. R. WAGER for papers from the United Kingdom and British Commonwealth, and for papers in English from Europe; Prof. C. W. CORRENS for papers in German or French; Prof. J. A. S. ADAMS for papers from the American continents. Papers on *cosmochemistry* should be sent to Prof. H. C. UREY. The final decision on all papers submitted rests with the Executive Editor. Papers submitted for publication will naturally be judged from the standpoint of scientific originality and novelty. Technical details of apparatus used in scientific investigation can, however, be presented in brief notes. Critical comments or preliminary results requiring early publication should be submitted as letters to the editors. Where possible, letters should be confined to 500 words. The preparation of progress reports and review articles will be invited by the editors from time to time. The journal appears as independent and complete numbers.

2. Only papers which have not been previously published can be accepted. Authors must agree not to publish elsewhere a paper submitted to and accepted by *Geochimica et Cosmochimica Acta*.

3. Fifty reprints of each paper are provided free. Additional copies can be purchased if ordered at the time of first proofs are returned. A reprint order form will accompany first proofs.

II. SCRIPT REQUIREMENTS

1. Scripts must be written in one of the three official languages—English, French or German.

2. The script should be typed (not a carbon copy). The text must be ready for printing and should be carefully checked for errors. Authors will receive proofs for correction. The original script plus two copies will assist in expediting publication.

3. Illustrations should accompany the script mounted on separate sheets. Line diagrams that require to be redrawn should include all relevant details. Half-tone illustrations should be restricted to the minimum necessary. Photographs should be enlarged sufficiently to permit their clear reproduction and if words or numbers appear on them, two copies should be sent, one clearly printed and the other without inscription. All illustrations should be provided with descriptive legends, which should be given on a separate sheet. Any lettering on diagrams—other than Greek letters, symbols, etc.—should be stencilled and should be sufficiently large and bold to permit reproduction when the diagram has been reduced to a size suitable for inclusion in the journal.

4. References in the text should be given by quoting the author's name and year of publication, i.e. AHRENS (1952). *Full references should be listed at the end of each paper, in alphabetical order, in the following manner*

AHRENS L. H. (1952) The use of ionization potentials—I. Ionic radii of the elements. *Geochim. et Cosmochim. Acta* **2**, 155–169.

and should include the full title of the article, standard abbreviated title of the journal, year, volume number and inclusive page numbers.

5. The text of articles submitted should be concise and in a readily understandable style. The technical description of the methods used should only be given in detail when such methods are new. The essential contents of each paper should be briefly recapitulated in an abstract in English. Such an abstract may, however, be submitted by the author in the language of the original typescript for translation into English by the editorial staff.

6. To conserve space, authors are requested to mark less important portions of the paper (such as description of methods, record of experimental results, etc.) for printing in smaller type.

7. Indices of refraction should be denoted by the symbols α, β, γ, ω, ε, n, and vibration directions by X, Y, Z, O, and E.
